RELEASE NOTES: CHCS-4.61 - RT

This release contains changes to existing software resulting from SIRs and the following UDFs: Medical Record Retirement/Retrieval (PAD 092251), Ambulatory Procedure Visits - Record Tracking Modifications (PAD 092412), and Record Tracking Modifications - Pull List by Provider (RAD 091251).

Release Notes are included in the OLUM and transmitted via separate messages by system or subsystem for each software version.

Medical Record Retirement/Retrieval (PAD 092251)

The Medical Record Retirement/Retrieval project supports identifying and reporting records eligible for retirement and transfer from a medical treatment facility (MTF) to the National Personnel Records Center (NPRC).

The Transfer/Retire Menu (FE) for Medical Record Tracking processing has been revised to support this project. The Transfer/Retire Menu includes three new options: Create Record Index (CRI), Edit/Process Record Index (EPR) and Delete Record Index (DEL). The previous menu options, Create List for Record Transfer/Retire, Edit Transfer/Retire List, Delete Transfer/Retire List, Process Transfer/Retire List and Print Transfer/Retire List are now only available through the Image Tracking Menu.

The new menu option, Create Record Index (CRI), allows you to create a record index that contains records that are eligible for retirement or transfer to another facility. You may set parameters specific to the type of records being retired or transferred. The record index may be sorted alphabetically or by terminal digits.

The new menu option, Edit/Process Record Index (EPR), allows you to perform activities associated with editing and processing the record index. You may remove or add records to the record index and record the associated box number in which the record is packaged. You may also create, edit and print a Shipment Data file which contains information regarding the facility retiring the records. The Shipment Data file replaces the Records Transmittal and Receipt form (SF 135). This option also allows you to place the record index and Shipment Data file into an American Standard Code for Information Interchange (ASCII) format. A bulletin is generated to notify the ASCII Mail Group members that the ASCII version of the record index and Shipment Data file are ready to be placed on a diskette for shipment.

The new menu option, Delete Record Index (DEL), allows you to delete a record index and its associated Shipment Data file.

Ambulatory Procedure Visits - Record Tracking Modifications (PAD 092412)

Modifications have been made to the Record Tracking functionality to support Ambulatory Procedure Visits (APV). A new record type, APV, allows you to create an APV record for patient encounters that last less than 23 hours and 59 minutes. The Type of Record Set-up (TYS) option now allows for an APV record type to be entered. A new option, Create APV Record (APV), is located in the Patient Appointment and Scheduling (PAS) functionality. The option is located on the Track & Request Medical Records Menu. This option allows you to create an APV record after the patient is "arrived" for an ambulatory procedure. The Label Formatter (LF) option has been revised to include the field name, APV Tracking Number, for use on APV labels.

Record Tracking Modifications - Pull List by Provider (RAD 091251)

The Print Pull List(s) (PT) option now allows you to sort pull lists by provider name.

```

[:K:Charge-Out Record Option
```

TM Transaction Menu

OT Charge-Out Record Option

The system now prevents users from adding new hospital locations when charging out a record. This prevents incorrect and duplicate entries being created in the Hospital Location file. Two new fields have been added to the Record Tracking Application file. These include Borrower File Laygo Key and RT Fileroom Specific Location File Laygo Key fields. The Borrower File Laygo Key field allows the RT system manager to place multiple levels of security on the ability to LAYGO entries into the Borrowers file and RT Fileroom Specific Locations file. (This SIR also affects the following options:

Request a Record
Borrower Set-up.) (SIR 23617)

[[SEARCH:Create a Label/Record/Volume
[:K:Create a Label/Record/Volume
TM Transaction Menu
CV Create a Label/Record/Volume

The system no longer prints routing cards from the pull list for appointments that have been cancelled. The pull list has been modified to print an asterisk (*) at the beginning of the Requester field and at the end of the Time field to indicate that this appointment has been cancelled. (This SIR also affects the following option:

Print Pull List(s).) (SIR 18113) (SCC 931100249)

[[SEARCH:Print Pull List(s)
[:K:Print Pull List(s) Option
PL Pull List Functions Menu
PT Print Pull List(s)

The system now displays the correct status of individual patient medical records when these records are charged out. Previously, the status of the records appeared correctly as "Charged Out" but the status of the individual patients within the clinic appeared as "Requested" instead of "Charged Out". (This SIR also affects the following option:

Fill A Request.) (SIR 23901) (SCC 951100809)

When printing Pull List(s), in addition to sorting the pull list by terminal digits; by clinic name, then by terminal digits; clinic name,
then by appointment time; clinic name, then by patient name; you may sort the pull list(s) by provider name, then by terminal digits.
(UDF RAD 091251)

[[SEARCH:Create a Pull List

IN Create Batch and Pull Lists from Schedules

The system no longer generates a PAS pull list when generating a pull list for Image Tracking and there are PAS clinic appointments on the same date. (SIR 25924) (SCC 960900704)

[[SEARCH:Cancel Request from Pull List
[:K:Cancel Request from Pull List Option

PL Pull List Functions Menu

FR Cancel Request from Pull List

The system no longer prints an error message when the users enter a double question mark (??) at the "Select Request" prompt when canceling a request from the pull list. This problem only occurred if a populated pull list exists. In addition, the File Room Staff Key and File Room Supervisor Key fields are now required. If these fields do not have any data, the system displays a message and does not allow you to file the record. (SIR 24620)

[[SEARCH:Record Inquiry
